

DEVESH SINGH

Pune, India | Full Stack & DevOps Engineer | Nearly 5 Years Experience
Next.js | Node.js | MongoDB | CI/CD | AWS

Email: devesh46singh@gmail.com
Phone: +91 78751 77354
LinkedIn: [linkedin.com/in/devesh-singh-769249129](https://www.linkedin.com/in/devesh-singh-769249129)
Portfolio: deveshsingh.in

Full Stack & DevOps Engineer with nearly 5 years building web and mobile products end-to-end (Next.js / React Native, Node.js / Express, MongoDB) and the Docker, Terraform, and CI/CD pipelines that ship them on AWS and Azure. Revamped the web and mobile platform of a European property-lending marketplace (€951M+ in loans) and raised automated test coverage to ~90% on targeted modules; senior developer on an AI-assisted observability platform.

Solo project: devtools.simarium.in, an interactive developer-infrastructure simulator with a live Git visualizer (merge, rebase, cherry-pick on a modelled commit graph).

TECHNICAL SKILLS

Frontend & Mobile:	Next.js, React.js, React Native, TypeScript, Android (Java, Kotlin)
Backend:	Node.js, Express.js, RESTful API Design, WebSocket, Apache Kafka
Databases & Caching:	MongoDB, PostgreSQL, Redis
Cloud & Infrastructure:	AWS (EC2, S3, RDS, IAM, CloudWatch, Lambda), Azure, Docker, Terraform, CloudFormation, Nx Monorepo
CI/CD & Monitoring:	GitHub Actions, Docker-based multi-environment pipelines, Blue-Green Deployment, Datadog, CloudWatch
Testing:	Jest, Cypress
Integrations:	Razorpay, Google Maps, Meta Business APIs (WhatsApp, Facebook, Instagram)

PROFESSIONAL EXPERIENCE

Nirmitee.io – Software Development Engineer II (SDE 2) Apr 2024 – Present

Promoted from Software Engineer. Own full-stack and DevOps delivery for client platforms, from requirements and system design through deployment and monitoring, working with product, design, and QA.

Estateguru — Full Stack Web & Mobile Revamp (FinTech / Real Estate) estateguru.co Jun 2023 – Jun 2025 · Nov 2025 – Present

Context: European property-lending platform with 160,000+ investors and €951M+ in loans facilitated across 8 countries. Started in the Software Engineer role, continued as SDE 2.

Stack: Next.js, TypeScript, React Native, Node.js, Express, MongoDB, AWS, Terraform, Docker, GitHub Actions, Nx Monorepo, Jest, Cypress, Datadog

- Revamped the legacy frontend to Next.js and TypeScript inside an Nx monorepo, rebuilding the investor dashboard, loan listings, and auto-invest flows across the web app and React Native mobile app with shared libraries, types, API clients, and business logic.
- Migrated the backend to Node.js/Express modular services on MongoDB, designing the schemas and REST APIs for investor, loan, and auto-invest data and migrating production data from PostgreSQL.
- Delivered role-based access control end to end: requirements, data model, APIs, UI, deployment, and monitoring.
- Containerised the application with Docker, built CI/CD pipelines in GitHub Actions, provisioned AWS infrastructure with Terraform for development, staging, and production, and set up Datadog monitoring and alerting with fast rollback for a regulated FinTech platform.
- Increased automated test coverage to ~90% for targeted application modules using Jest and Cypress.

NextDecade Observability Platform (AIOps) — Senior Developer Jun 2026 – Jul 2026

Context: Part of a larger programme to fully automate operations for a sustainable-energy solutions company.

Stack: React, Node.js, Express, MongoDB, CI/CD, Terraform, Azure, Azure AI Foundry (GPT-5.4)

- Senior developer on a 5-person team (3 developers, 1 QA): owned system design, code review, and delivery.
- Built an AI-assisted log analysis and monitoring platform that surfaces issues and suggested fixes from application logs, integrating logs and metrics from multiple sources via their APIs.
- Used GPT-5.4 through Azure AI Foundry to analyse logs across the stages of the process lifecycle, producing explanations and suggested fixes so teams could understand and resolve issues faster.
- Provisioned Azure infrastructure with Terraform and set up CI/CD pipelines for the MERN stack.

Nov 2021 – Apr 2024

Nirmitee.io – Software Engineer (Consultant Graduate)

- Delivered production web applications with React, Node.js/Express, and AWS for financial analysis (Datachamps, PostgreSQL), practice management (Bestosys), and mobility (Boongg); see Additional Projects.
- Began the Estateguru revamp in this role and carried it through as SDE 2 (entry above).
- Earned Employee of the Month recognition for consistent delivery and client satisfaction.

Modcart — Advertising Platform with Real-time Analytics (AdTech) modcart.io

Jun 2022 – May 2023

Context: One-stop platform for ads and single-page stores that embed into websites and mobile apps; the platform has since moved to a coupon-based model.

Stack: React.js, Node.js, Express, MongoDB, Redis, Apache Kafka, WebSocket, AWS, CloudFormation

- Designed the architecture and database schemas for user-interactive single-page stores, and built them with responsive layouts across mobile, tablet, and desktop so advertisers could reuse one creative across placements.
- Built role-based access control, payment integration, and analytics on ad interactions and campaign performance.
- Introduced Kafka event processing for ad-campaign analytics, decoupling ingestion from transactional workloads, with Redis caching for fast aggregation and reporting.
- Built a WebSocket-based real-time chat with Meta integration (WhatsApp, Facebook, Instagram) so advertisers could reach customers across channels from one inbox.
- Defined dev, staging, and production environments as code with CloudFormation on AWS and added blue-green deployment, cutting deployment downtime from ~8 minutes to 10–15 seconds.

ADDITIONAL PROJECTS

- **Boongg** (Mobility) — boongg.com — Bike-rental platform (1M+ rides, 200K+ customers, 1,500+ bikes). Improved booking, availability, and analytics features for customers and admins; integrated Razorpay payments and Google Maps for live bike location, pickup, and booking flows. React.js web, Android (Java/Kotlin), Node.js/Express on MongoDB, deployed on AWS. *Aug 2022 – Oct 2022*
- **Bestosys** (HealthTech) — Dental practice-management software letting doctors manage patient records, appointment scheduling, prescriptions, reports, and patient communication in one platform. *Feb 2022 – Mar 2022*
- **Datachamps** (FinTech) — Financial-analysis tool on PostgreSQL that lets analysts explore data through dashboards, with a desktop companion app and automated report generation that replaced manual reporting. *Dec 2021 – May 2022*
- **DevTools** (Personal) — devtools.simarium.in — Built an interactive developer-tools project featuring a Git visualizer that simulates commit graphs and operations such as merge, rebase, and cherry-pick. *Apr 2026 – Present*

EDUCATION

Bachelor of Engineering – Datta Meghe College of Engineering

University of Mumbai | Airoli, Maharashtra, India

Jul 2016 – Oct 2020

CGPA: 7.86
